UMESH BHARDWAJ

Cybersecurity Analyst Candidate | SOC Monitoring, Alert Investigation & Incident Response

+91 6283717436 | umeshdk22@gmail.com | LinkedIn Profile | Village Rakri, Hoshiarpur, Punjab, India | **verth.in**

Languages: English, Hindi, Punjabi

PROFILE SUMMARY

B.Tech graduate in Computer Science & Engineering (2026) targeting an entry-level Cybersecurity/SOC Analyst role, backed by the ISC2 Certified in Cybersecurity and Google Cybersecurity Professional Certificate — both completed independently and covering SIEM tools (Splunk), the NIST Cybersecurity Framework (CSF), and incident response procedures. Hands-on remote cybersecurity internship experience with SIEM-based threat detection, alert classification, and incident response workflows. Founder of **Verth (verth.in)**, a live scam-detection and identity-verification platform for Indian users with passwordless login, end-to-end encryption, live payments and a published, openly tested detection engine. Also built four full-stack Python applications, including security tools for SHA-256 integrity verification and event classification and logging. Comfortable with Linux (Kali Linux), MySQL and secure coding; a clear communicator motivated to grow in a security operations environment.

CORE COMPETENCIES

Security Monitoring & Alert Analysis: SIEM tools (Splunk), security event/log monitoring, alert investigation & classification, structured audit logging

Incident Response & Triage: NIST Cybersecurity Framework (CSF), incident response procedures, initial triage & escalation, threat detection and classification (internship)

Vulnerability Management & AppSec: Vulnerability identification & remediation, threat modelling, access-control rules, rate limiting, Content Security Policy, SHA-256 integrity verification, secure coding fundamentals

Tooling, Automation & Data: Python (4 full-stack projects), JavaScript, Firebase/Firestore, Cloudflare Workers, GitHub Actions CI/CD, SQL, MySQL/PyMySQL, Data Structures & Algorithms, C++, C

Platforms: Linux (Kali Linux), VS Code, PyCharm, XAMPP, GitHub

Professional Attributes: Analytical problem-solving, clear written & verbal communication, collaboration, self-directed learning, remote work

KEY PROJECTS

Verth — Scam-Check & Verification Platform (verth.in) *Founder & Developer — Live Product*

- **Live Product, End to End:** Built and launched a web app to check suspicious messages, links, numbers and screenshots, and confirm money requests with the real person (JavaScript, Firebase, Cloudflare Workers, live Razorpay payments).
- **Threat Detection Engine:** Built an on-device, rule-based scam detector (18 warning-sign rules plus link, phone-number and job-offer checks against official domains of 33 brands and 26 employers); benchmarked it on 79 messages and published the results, misses included.
- **Security Engineering:** Passwordless email-OTP login (HMAC-stored codes, attempt limits, Cloudflare Turnstile), device-bound P-256 signing keys, end-to-end encrypted chat, least-privilege Firestore rules, strict CSP and a documented threat model.
- **DevSecOps:** GitHub Actions pipeline running unit, database-rules and end-to-end tests, CodeQL and secret scanning before every deployment.

Secure File Transfer Monitoring *Independent Cybersecurity Project*

- **Alert Monitoring & Investigation:** Built a Python tool (Kali Linux) that monitors file-system activity in real time to investigate and classify suspicious behavior.
- **Vulnerability Detection & Verification:** Applied SHA-256 integrity checks — a foundational secure-coding verification technique — to detect tampering, confirm data integrity, and support vulnerability identification.
- **Structured Logging & Triage Documentation:** Designed a classification and audit-logging system to triage authorized activity versus security events.

Smart, AI-Enhanced Expense Tracker (Xpenso) *7th Semester — Self-Initiated*

- **Full-Stack Software Delivery:** Independently designed and built a secure desktop application (Python/Tkinter, MySQL) end to end, with AI-driven forecasting that analyzes spending data and surfaces predictive recommendations.
- **Vulnerability Remediation:** Identified and remediated an authentication vulnerability (unlimited login attempts) by engineering access controls — login-attempt limits, session handling, and automated alerting.

Personal Expense Tracker *6th Semester*

- **Trend Analysis:** Built a Tkinter/MySQL desktop application with Matplotlib visualizations, CSV export and automated budget-limit alerts to analyze spending trends.

Bus Reservation Management System *4th Semester*

- **Process Automation:** Ticket booking with secure login, seat booking and automatic PDF tickets over a relational database of routes and bookings.

CERTIFICATIONS & INTERNSHIPS

- **Google Cybersecurity Professional Certificate:** Completed all modules: asset protection, network security, SIEM tools (Splunk), incident response, NIST CSF, secure coding, vulnerability fundamentals and Python security automation.
- **ISC2 Certified in Cybersecurity:** Fundamentals of security, networking, security risk management, governance, cyber threat analysis, and incident response procedures.
- **Cybersecurity Internship, Unified Mentor (Remote):** Hands-on exposure to SIEM tools, threat detection and classification, and incident response procedures.
- **Python Development Internship (45 Days):** Focused on GUI development and database integration.

EDUCATION

Bachelor of Technology, Computer Science & Engineering *2022 – 2026*
IKGPTU, Jalandhar — CGPA: 8.08 (Aggregate, All Semesters)

Senior Secondary (XII), CBSE *2020 – 2021*
Vasishat Bharti International School, Datarpur — Percentage: 91.6%
